Professional Summary

Data Scientist and Mechatronics Engineer with over 2 years of professional and internship experience leveraging robotics expertise and advanced predictive modeling to optimize industrial performance. Known as a proactive self-starter with a proven track record of reducing server downtime by 72% and improving reporting efficiency by 25% through automated workflows. Specialties include designing high-precision machine learning models, Natural Language Processing (NLP), robot system development, and real-time data visualization in Tableau to drive reliable, data-led decision-making.

Experience

DATA ANALYTICS TRAINEE | BUSINESS FULL SPECTRUM | MARCH 2025 – JULY 2025

- **Enhanced reporting efficiency by 25%** by executing end-to-end data workflows, including gathering, cleaning, and interpreting complex datasets to produce high-impact analytical reports.
- **Reduced stakeholder decision-making time by 15%** through the development of rich, interactive Tableau dashboards that provided real-time data visualizations.
- **Exceeded professional development targets** as measured by senior management feedback, by proactively engaging in in-depth technical inquiries and demonstrating high-level initiative in data analysis tasks.

ASSOCIATE AI DATA SCIENTIST / ANALYST | SECURE KLOUD TECHNOLOGIES LTD | JANUARY 2023 – JANUARY 2024

- **Reduced server downtime by 72%** by training a predictive anomaly detection model that alerted the team to abnormal system behaviors before failures occurred.
- **Decreased manual processing time by 40%** through the implementation of Natural Language Processing (NLP) and predictive pipelines to automate high-volume data classification.
- **Identified critical performance drivers** by analyzing large, complex datasets using Python and SQL to provide actionable optimization opportunities.

MECHATRONICS INTERNSHIP | JAGUAR LAND ROVER | JANUARY 2021 – SEPTEMBER 2021

- **Eliminated 100+ vehicle rejections** caused by incorrect chassis tagging by engineering a Poka-yoke system prototype.
- **Improved shop floor quality control** by developing and deploying cost-effective hardware solutions using Arduino and RFID Reader technology.

ROBOTICS ENGINEER INTERN | ZF GROUP | AUGUST 2019 – SEPTEMBER 2019

- **Increased shop floor safety by 80% and reduced operational costs** by developing a 6-axis SCARA robot using Python with a cross-functional team.
 - **Exceeded performance targets** while delivering the project on time and within budget through efficient resource management.
-

Education

MASTER OF SCIENCE IN DATA SCIENCE | KINGSTON UNIVERSITY, LONDON, ENGLAND

Relevant coursework: Applied Data Programming, Data Analytics, Databases, and Machine Learning.

MASTER OF SCIENCE IN MECHATRONICS AND AUTOMATION | UNIVERSITY OF STRATHCLYDE, GLASGOW, SCOTLAND

Relevant coursework: Mechatronics System Design, Robotics, Systems and Control, Product Modelling, and Manufacturing Automation.

BACHELOR OF ENGINEERING IN MECHANICAL ENGINEERING WITH AUTOMOTIVE DESIGN (HONOURS) | BRUNEL UNIVERSITY, LONDON, ENGLAND

Relevant coursework: Solid Body Mechanics, Engineering Design, Computing Methods, Vehicle Design, Thermofluids, and Mechanical Systems Analysis.

Certifications

- Machine Learning and Data Science Hands-on with Python and R
 - Raspberry Pi Workshop, Become a Coder / Maker / Inventor
-

Technical Skills

Programming Languages: Python, SQL, C++, MATLAB

Data Visualization Tools: Power BI, Tableau, Matplotlib, Seaborn

Tools: Ansys Products (Creo Parametric, Fluent), CAD (SolidWorks), ROS

Development: Git, R Studio, Linux, Windows, macOS

Emerging Tech: Machine Learning and Artificial Intelligence

Other Tools: Microsoft Office (Advanced)

Projects

COLLISION-TOLERANT DRONE

- Designed and developed a drone with real-time collision avoidance using computer vision and ROS.
- **Skills:** ROS, Python, Machine Learning, Hardware Integration, Flight Testing

BLOOD FLOW ANALYSIS VIA FLUID DYNAMICS AND AI

- Developed a model combining fluid dynamics simulations with artificial intelligence to analyze and predict blood flow patterns.
- **Skills:** Fluid Dynamics, AI/Machine Learning, Data Analysis, Modelling, Simulation.
